Before packing your balance, unplug all connected cables to prevent damage. Moisture in the air can condense on the surfaces of a cold balance whenever it is brought to a substantially warmer place. If you transfer the balance to a warmer area, make sure to condition it for about 2 hours at room temperature, leaving it unplugged from AC power. This balance is not allowed to be used for weighing goods intended for direct sale to the public. The type approval certificate for verification applies only to nonautomatic weighing instruments. For balances of accuracy class k, a thermometer and barometer are recommended for monitoring ambient conditions. The temperature range indicated on the verification ID label must not be exceeded during operation. This control seal consists of an adhesive label with the name "Sartorius" on it. This seal will be irreparably damaged if you attempt to remove it. In this case, the validity of the seal becomes void and you must have your balance reverified. Turn the disk counterclockwise until it stops and is secured. Turn the disk counterclockwise until it stops and is secured. Make sure that the voltage rating printed on this unit

is identical to your local line voltage. If the voltage specified on the label or the plug design of the AC adapter does not match the rating or standard you use, please contact your dealer. Important Note Use only original adapters.http://www.salmododia.com.br/imagens/imagens_usuarios/cost-to-switch-automatic-transmission-to-manual.xml

Use of AC adapters from other manufacturers, even if these units have a registered approval rating from a national testing laboratory, requires the consent of an authorized service technician. Biopharma industrial scale cell harvesting, broth clarification and separation of cell debris, separator can be a closed sanitized system, separates particles to 0.1 micron. Be sure to use this value in calculating the rpms required for each rotor. Here are a few important guidelines for operating a centrifuge. These can help prevent damage to the centrifuge and rotor and more importantly prevent possible serious injury to you and others. Use the correct rotor and make sure it is properly installed. Make sure your work surface is level and firm. A centrifuge should never be in operation on an uneven work surface. Balance the load in a rotor. If it is an identical liquid that you are balancing against, then volume will work just fine. Stop or unplug a centrifuge if you see excessive shaking. Check to see if your tubes are balanced and that work surface is level. If that's not the problem, schedule a service call. Don't move or bump the centrifuge while it is spinning. Make sure the centrifuge is in a location where this cannot accidentally happen. Don't open the lid to a centrifuge while it is spinning. Wear safety goggles if you are working near an operational centrifuge. Use the appropriate sample tubes for your rotor. Make sure your tubes are rated to be able to handle the max rcf of your rotor.
