If harmful levels of carbon monoxide are detected, your alarm will emit a series of four beeps followed by a short pause; this will be accompanied by a flashing red light. This pattern will be repeated until the alarm is successfully r eset. If the alarm is emitting a different pattern of beeps see section A above. Record those numbers her e 6. Do not reenter the pr oper ty until the alarm has stopped. 7. Get medical help immediately for anyone suffering the effects of carbon monoxide poisoning headache, nausea, and advise that carbon monoxide poisoning is suspected. 8. Do not use the fuelburning appliances again until they have been checked by an expert. What to do after resetting the alarm A full continuous alarm within six minutes after reset confirms ongoing presence of harmful levels of carbon monoxide. If this occurs follow instructions 2 to 8 as per above. What to do after a carbon monoxide problem has been corrected. How to reset the alarm The alarm will reset once the carbon monoxide has dispersed. The unit will realarm if the levels of carbon monoxide are still hazar dous. Carbon monoxide CO is odourless, colourless, tasteless and very toxic. When inhaled, it produces an effect known as chemical asphyxiation. Injury is due to the combining of CO with the available haemoglobin in the blood, which lowers the oxygencarrying capacity of the blood. In the presence of carbon monoxide, the body is quickly affected by oxygen starvation. The following symptoms are r elated to carbon monoxide poisoning and should be discussed with all members of

the household so that they know what to look for Extreme Exposure AC below. Unconsciousness, convulsions, cardio respiratory failure, death. Young children and household pets may be the first affected. Exposure during sleep is particularly dangerous because the victim usually does not awaken. For most people, mild symptoms generally will be felt after several hours of exposure to 100 ppm of carbon monoxide. <http://strahovka66.ru/userfiles/cubasis-manual-ios.xml>

Higher levels will lead to more severe symptoms or death. D. What is carbon monoxide and why should you be concerned. Carbon monoxide is a dangerous, poisonous gas. It is often referred to as the Silent Killer because it has no odour or taste and it can't be seen. The presence of carbon monoxide inhibits the blood's capacity to transport oxygen throughout the body, which can eventually lead to brain damage. In any enclosed space home, office, recreational vehicle or boat even a small accumulation of carbon monoxide can be dangerous. E. What are the potential sources of carbon monoxide. Although many products of combustion can cause discomfort and adverse health effects, it is carbon monoxide CO that presents the greatest threat to life. CO is produced by the incomplete combustion of fossil fuels such as natural gas, propane, heating oil, paraffin, coal, char coal, petrol or wood. The incomplete combustion of fossil fuel can occur in any device that depends on burning for energy or heat such as gas fires, central heating boilers, room heaters, water heaters, cookers or grills and in any petrolpowered vehicle or engine e.g. generator set or lawnmower. Tobacco smoke also adds CO to the air you breathe. When properly installed and maintained, your natural gas boiler and hot water heater do not pollute your air space with carbon monoxide. Carbon dioxide CO₂ is also present in the air we exhale and is necessary for plant life. The products of combustion are vented from boilers and water heaters to the outside by means of a flue, duct or chimney. Correct operation of fuelburning equipment requires two key conditions. How can you maintain your alarm. An alarm is useful only if it works. The following illustration explains proper maintenance. Changing the battery CO850MBXi. Mains units with a replaceable battery backup the alarm will beep once every minute. Do this before turning on the main electricity supply.

NOTE The CO850MRLi has sealed Lithium Rechargeable battery backup. These batteries are not replaceable. G. How can you test the alarm. A flashing red light will be accompanied by a repeating series of four beeps followed by a 5 second pause. Test weekly. Test button will only function when alarm is fully installed on the patters. This device is not suitable for installation in a hazardous location, as classified in BSEN 60079101996. Caution This alarm will only indicate the presence of carbon monoxide at the sensor. Carbon monoxide may be present in other areas. BRK Brands Europe Ltd shall not be obligated to pay for any carbon monoxide investigation or service call. Vacuum the outside of the alarm including the air vent on the front and base. Battery Access Door This Carbon Monoxide alarm shall not be seen as a substitute for proper servicing of fuelburning appliances, or sweeping of chimneys, or as a substitute for either a smoke alarm or a combustible gas alarm. 2 Keep matches or lighters away from children; 3 Store flammable materials in proper containers; 4 Keep electrical appliances in good condition and don't overload electrical circuits; 5 Keep cookers, barbecue grills, fireplaces and chimneys grease and debris free; 6 Never leave anything heating on the cooker unattended; 7 Keep portable heaters and open flames, like candles, away from flammable materials; 8 Don't let rubbish accumulate. Keep alarms clean, and test them weekly. Replace alarms immediately if they are not working properly. Smoke Alarms that do not work cannot alert you to a fire. Keep at least one working fire extinguisher on every floor, and an additional one in the kitchen along with a fire blanket. Have fire escape ladders or other reliable means of escape from an upper floor in case stairs are blocked. This unit monitors the air, and when smoke reaches its sensing chamber, it alarms. It can give you more time to escape before fire spreads. This unit can ONLY give an early warning of developing fires if it is installed, maintained and located where smoke can reach it, and where all residents can hear it, as described in this manual. This unit will not sense gas, heat, or flame. It cannot prevent or extinguish fires. Understand The Different Type of Smoke Alarms Battery powered or mains powered. Different Smoke Alarms provide different types of protection. See "About Smoke Alarms" for details. Know Where To Install Your Smoke Alarms Fire Safety Professionals recommend at least one Smoke Alarm on every level of your home, in every bedroom, and in every bedroom hallway or separate sleeping area. See "Recommended Locations For Smoke Alarms" and "Locations To Avoid For Smoke Alarms" for details. Know What Smoke Alarms Can and Can't Do A Smoke Alarm can help alert you to fire, giving you precious time to escape. It can only sound an alarm once smoke reaches the sensor. See "Limitations of Smoke Alarms" for details.

Check Your Local Building Codes This Smoke Alarm is designed to be used in a typical single family residence. It alone may not meet requirements for boarding houses, sheltered housing, hotels, motels, hostels, inns or communal escape routes in blocks of flats. Smoke particles of varying number and size are produced in all fires. Ionisation technology is generally more sensitive than photoelectric technology at detecting small particles, which tend to be produced in greater amounts by flaming fires, which consume combustible materials rapidly and spread quickly. Sources of these fires may include paper burning in a wastebasket, or a grease fire in the kitchen. Photoelectric technology is generally more sensitive than ionisation technology at detecting large particles, which tend to be produced in greater amounts by smouldering fires, which may smoulder for hours before

bursting into flame. Sources of these fires may include cigarettes burning in couches or bedding. For maximum protection, use both types of Smoke Alarms on each level and in every bedroom of your home. Be sure the circuit cannot be turned off by a switch, dimmer, or ground fault circuit interrupter. If the mains AC power fails, battery backup will allow the alarm to sound for at least 4 minutes. If mains AC power fails and the battery is weak, protection should last for at least 30 days. Doing so will disable the unit and remove your protection. In the case of a true unwanted alarm open a window or fan the smoke away from the unit. The alarm will reset automatically when it returns to normal operation. Never remove the batteries from a battery operated unit to stop an unwanted alarm caused by cooking smoke, etc.. Instead open a window or fan the smoke away from the unit. See " How To Install This Smoke Alarm " for details. Do not connect it to any other type of alarm or auxiliary device. It is loud to wake you in an emergency.

Paint may clog the openings to the sensing chambers and prevent the unit from operating properly. Ask your question here. Provide a clear and comprehensive description of the issue and your question. The more detail you provide for your issue and question, the easier it will be for other BRK 7010BE owners to properly answer your question. Ask a question About the BRK 7010BE This manual comes under the category Smoke detectors and has been rated by 1 people with an average of a 9. Thanks for your support! Units are easy to install, and do not require professional installation. They do not operate Units must be installed by a qualified electrician. Units must be installed by a qualified electrician. They do not operate if electricity fails.

Units must be installed by a qualified electrician. If you are unsure which type of unit to install, refer to Chapter 2 of the National Fire Protection Association NFPA Standard 72 National Fire Alarm Code and NFPA 101 Life Safety Code. National Fire Protection Association, One Batterymarch Park, Quincy, MA 022699101. Local building codes may also require specific units in new construction or in different areas of the home. It is not a suitable substitute for complete fire detection systems in warehouses, industrial facilities, commercial buildings, and specialpurpose non residential buildings which require special fire detection and alarm systems. Depending on the building codes in your area, this smoke alarm may be used to provide additional protection in these facilities. Refer to NFPA 72 National Fire Alarm Code or NFPA 101 Life Safety Code, local building codes, or consult your Fire Department for detailed fire protection requirements in buildings not defined as "households." It is recommended smoke alarms be installed on every This smoke alarm is suitable for This smoke alarm is suitable for use in This smoke alarm is suitable for use inside individual However, like any warning device, smoke alarms can only work if they are properly located, installed, and maintained, and if smoke reaches them. They are not foolproof. AC units cannot work if the AC power is cut off for any reason open fuse or circuit breaker, failure along a power line or at a power station, electrical fire that burns the electrical wires, etc.. If you are concerned about the limitations of battery or AC power, install both types of units. That is why one unit should be installed inside each bedroom or sleeping area—especially if bedroom or sleeping area doors are closed at night—and in the hallway between them. This may not give you enough time to escape safely.

That is why recommended minimum protection is at least one unit in every sleeping area, and every bedroom on every level of your home. Even with a unit on every floor, standalone units may not provide as much protection as interconnected units, especially if the fire starts in a remote area. Some safety experts recommend installing interconnected AC powered units with battery backup see "Other Features Of Smoke Alarms" or professional fire detection systems, so if one unit senses smoke, all units alarm. Interconnected units may provide earlier warning than standalone units since all units alarm when one detects smoke. Sources of these fires may include paper burning in a wastebasket, or a grease fire in the kitchen. Sources of these fires may include cigarettes burning in couches or bedding. If you are installing this smoke alarm for use by others, you must leave this

manual—or a copy of it—with the end user. This allows for easy installation when replacing the specified smoke alarm brands with a Kidde product. The smoke alarm adapter also allows the specified approved brands and models to be interconnected with other Kidde products. This allows for easy installation when replacing the specified smoke alarm brands with a Kidde product. The smoke alarm adapter also allows the specified approved brands and models to be interconnected with other Kidde products.
